## GENERAL INFORMATION

Actuarial Science preparation is a listing of strongly recommended courses for students interested in pursuing a career as an Actuary. These courses cover topics that will be included in some of the preliminary professional exams that students need to pass to become a credentialed Actuary. Additional study outside of the degree program will be required to successfully complete the remaining Actuary exams.

Preparation for becoming an Actuary is not a defined degree program, but students should plan on pursuing a degree in Mathematics or Economics. **The best preparation will likely come from pursuing the Statistics Option in the BS in Mathematics program or the Actuary/Applied Analysis Elective Focus in the BA in Economics program supplemented with the course work below, much of which is already required for these degree programs.**
