## GENERAL INFORMATION

Actuarial Science preparation is a listing of strongly recommended courses for students interested in pursuing a career as an Actuary. These courses cover topics that will be included in some of the preliminary professional exams that students need to pass to become a credentialed Actuary. Additional study outside of the degree program will be required to successfully complete the remaining Actuary exams.

Preparation for becoming an Actuary is not a defined degree program, but students should plan on pursuing a degree in Mathematics or Economics. **The best preparation will likely come from pursuing the Statistics Option in the BS in Mathematics program supplemented with the course work above, much of which is already required for the degree program.**
